Quarterly Commentary as at March 31, 2017

For the second consecutive quarter, the Fund delivered negative performance, albeit more modest than in the final quarter of 2016.

This is the result of a continued upwards migration in real yields, which have been inching up since historic lows (near zero per cent) were reached last September. Real yields are influenced by many of the same economic factors that drive nominal yields, such as employment, manufacturing and consumer sentiment, which have all shown resilience recently. The difference, however, is that real yields, by definition, are designed to deliver a higher level of return with higher levels of inflation (and vice-versa). Canadian inflation moved up over the quarter, going from 1.5% to 2.0%, the middle of the Bank of Canada's target band. This helped the absolute performance of the Fund, and partially offset negative effects of rising real yield levels.

With no strong view on the absolute direction of real rates over the quarter, we focused the Fund's strategies on pockets of "inefficiencies" in the imperfect real return bond market. These strategies included trades between the various maturities of real return bonds (RRBs) when mispricings appeared and the tactical use of nominal bonds when inflation expectations appeared heightened. Focusing on these strategies resulted in modestly positive performance over the quarter.

The Fund also has a small allocation to Provincial and corporate RRBs to enhance yield, although these positions are constrained by a lack of supply in these sectors. With the Fund's real yield at approximately 0.5% – low by historical standards – the Fund remains susceptible to further negative performance if real rates continue to rise.
