

# RBC Global Resources Fund

## Investment Objective

To provide long-term capital growth by investing in equity securities of companies around the world in any or all of the Energy, Materials, Industrials, and Utilities sectors. The fund will invest in companies that are involved directly or indirectly in the exploration, development, production or distribution of natural or other resources.

### Quarterly Commentary as at December 31, 2017

The Energy sector delivered robust returns in Q4. The oil price reclaimed the psychologically important US\$50 per barrel mark and even surpassed US\$60 to close 2017 at a multi-year high. Natural gas prices remained within a trading range around US\$3.00 per million Btu, but received a boost from widespread, colder-than-normal temperatures in December. Recently, there have been positive signs that global excess crude inventories are beginning to rebalance, although inventories still remain above normalized levels.

The Materials sector delivered strong results in Q4. Robust moves in the underlying commodities like Iron Ore which was up 21% and Copper which was up 11.6% due to strong fundamental demand and a weaker U.S. currency. Electric Vehicle themed commodities such as Lithium also strengthened on the back of solid demand also helped the fund this quarter.

The Fund's relative performance versus the benchmark was positively impacted by exposure to high-quality exploration and production companies

which rallied strongly on crude oil's gains. Overweight positions in Diamondback Energy and Concho Resources, with acreage positions in the Permian Basin, were amongst the largest contributors to performance, as were Encana and Parex Resources. Overweights in Nemaska Lithium, Neo Lithium and Major Diversifieds like BHP and Rio Tinto helped the Fund outperform.

The portfolio manager believes that OPEC's November extension limiting production until the end of 2018 should help to accelerate inventory rebalancing. It is now anticipated that global inventories should gradually return to normalized levels in the second half of 2018, even with incremental growth from U.S. on-shore basins. Assuming global inventories continue to decline, the portfolio manager sees the potential for gains in oil prices and energy-equity prices during 2018. The portfolio manager's approach remains to invest in companies with high-quality assets, strong management and the ability to finance growth projects.
