

RBC Retirement 2050 Portfolio

Investment Objective

This fund is an asset allocation fund designed to meet the needs of investors who are saving money towards their retirement, which they expect will commence around 2050. After an initial phase of increasing equity exposure, the fund invests primarily in equities until 10 years prior to retirement, at which point it gradually shifts its asset mix from an emphasis on equity funds to an emphasis on fixed income funds. Over the life of the fund, its portfolio will shift from a focus on funds with growth potential to a focus on funds that will preserve capital.

Quarterly Commentary as at June 30, 2017

RBC Retirement 2050 Portfolio was launched on October 11, 2016. Investment performance is not provided for a fund that has been available for less than one year.

The portfolio manager is budgeting for a bit faster global economic growth over the next few years than has been the case in the recent past, and expects bond yields to rise over the long term. However, fading confidence in President Trump's ability to bolster growth and generate faster inflation has recently weighed on yields,

reintroducing the fixed-income valuation risk that had been alleviated shortly after the election.

Global equities have reached new highs and valuations may no longer be a driving force for stocks, at least in the U.S. Fortunately, U.S. profit growth is recovering from a two-year decline and, if earnings continue to rise as analysts expect, the total-return potential for stocks remains quite positive.
