Quarterly Commentary as at December 31, 2017

Over Q4, the Fund performed generally on par with the benchmark on a gross basis. Performance benefited from security selection in the Information Technology and Utilities sectors. Information Technology companies the Fund holds, like Microsoft, have benefited from strong earnings and are likely to see a positive impact from U.S. Tax reform. The new tax law will provide incentive to repatriate large foreign cash reserves and reduce debt. Utilities the Fund holds, like Exelon and Southern Company, were among companies that stand to benefit from an improved regulatory environment.

Other factors contributing to performance were the Fund's overweight in BBB-rated bonds, which slightly outperformed higher quality (A-AAA) bonds. The Fund's relative underexposure to the commodity-related sectors, Basic Materials and Energy, detracted from performance. The Fund did not own bonds of lower-quality commodity companies, such as Vale, which performed well

during the quarter.

We continue to favor large companies with stable to improving credit profiles. We avoid companies that are likely to finance large acquisitions with debt or are likely to engage in shareholder friendly activity at the expense of bondholders.

Sector over-weights are in the Financials and Utilities sectors. We prefer companies that focus on the U.S. market, generate consistent cash flow and are in the process of reducing debt. The regulatory environment in the Financials and Utilities sectors has also had a favorable impact on the credit profile of these companies.

Interest rate positioning relative to the benchmark continues to be largely neutral. Our philosophy is grounded in a tight risk management focus which reinforces our belief that interest rate calls are difficult to time – and expensive when wrong.
