Quarterly Commentary as at June 30, 2017

The combination of increases in the U.S. Federal Reserve rate and diminished expectations of higher inflation has led to a flatter yield curve. The spread between 2-year and 10-year rates decreased by 0.22% over Q2. Credit spreads of investment grade corporate bonds generally tightened during Q2. Overall, Lower quality BBB bonds continued to outperform higher quality (A-AAA) bonds and longer maturity bonds outperformed short and intermediate bonds.

Overall the strategy benefited from declining Treasury yields and tightening credit spreads. Security selection was a primary driver of performance. The strategy seeks to add value by focusing on stable to improving credit profiles and selectively participating in new issues that provide opportunity for significant spread compression relative to the benchmark. Additionally, the Fund's overweight to BBB rated securities provided positive performance relative to the benchmark. Sector allocation was fairly neutral and duration

effects were minimal to relative performance.

Sector over-weights are in the Financials, Utilities and Telecommunication Services sectors. We prefer companies that focus on the U.S. market, generate consistent cash flow and are in the process of reducing debt. The regulatory environment in the Financials and Utilities sectors has had a favorable impact on the credit profile of these companies.

We continue to favor large companies with stable to improving credit profiles. We avoid companies that are likely to finance large acquisitions with debt or are likely to engage in shareholder friendly activity at the expense of bondholders. Interest rate positioning relative to the benchmark continues to be largely neutral. Our philosophy is grounded in a tight risk management focus which reinforces our belief that interest rate calls are difficult to time and expensive when wrong.
