Quarterly Commentary as at March 31, 2018

The FTSE TMX Canada (formerly DEX) Federal Bond Index returned 0.33% for the quarter. The FTSE TMX Canada Universe Bond Index returned 0.1%, the FTSE TMX Canada Corporate Bond Index returned 0.3% and the FTSE TMX Canada Provincial Bond Index returned -0.3%.

The Bank of Canada (BoC) raised its short-term interest rate as expected in January. The BoC remained cautious on further hikes, citing relatively high household debt levels, tighter mortgage regulations and uncertainty surrounding NAFTA's survival. Yield curves continued to flatten with short-dated bond yields rising more than their long-maturity peers. As a result, the benchmark's positive performance was mostly from long-maturity bonds. Fear of trade wars and volatility in equity markets were the main focus in the second half of the quarter and government bonds

benefited from safe-haven concerns.

Fund performance benefited from an overweight allocation to longer-maturity Canadian bonds and Canada Mortgage bonds, which provided higher income.

Looking ahead, the portfolio manager expects the BoC's reluctance to hike rates to continue and its decisions to be data-dependent. The global economy continues to expand at a healthy pace and policy tightening by major central banks is expected to gain speed later this year, which is likely to push bond yields higher. The Fund will continue to overweight Canada Mortgage bonds as the higher income they offer will help offset capital losses if yields rise further.
