MANAGEMENT DISCUSSION OF FUND PERFORMANCE

Investment Objective and Strategies

The Fund seeks to provide long-term capital growth while minimizing the exposure to currency fluctuations between foreign currencies and the Canadian dollar. The Fund invests primarily in equity securities of a diversified mix of companies operating in various countries around the world across a range of sectors that may grow their dividends over time, either directly or indirectly in other funds managed by RBC GAM or an affiliate of RBC GAM.

The Fund invests in stocks that have undergone a selection process emphasizing companies with a sustainable competitive advantage, high and sustainable profitability and strong management teams. The Fund uses currency hedges to minimize the impact of fluctuations in foreign currencies versus the Canadian dollar.

Risk

There were no significant changes to the investment objective and strategies that affected the Fund's overall level of risk during the reporting period. The risks of investing in the Fund and the suitability of the Fund for investors remain as discussed in the Simplified Prospectus.

Results of Operations

The Fund's net asset value fell to \$71 million as of December 31, 2024, from \$78 million at the end of 2023. The decrease was due to net outflows, partially offset by investment returns.

Over the past year, the Fund's Series F units gained 18.3%, which underperformed the 20.7% rise in the benchmark. The Fund's return is after the deduction of fees and expenses, while benchmark and broad-based index returns do not include any costs of investing. See the Financial Highlights section for the management expense ratios and the Past Performance section for the returns of any other series, which may vary because of differences in management fees and expenses.

Global equity markets posted strong gains for a second straight year, fuelled by growing conviction that the U.S. economy might avoid recession and that falling inflation would allow central banks to implement a succession of interest-rate cuts. The positive developments were only temporarily interrupted by geopolitical tensions in the Middle East in April and by a surprise move to tighter monetary conditions in Japan in August.

The year's equity gains were dominated by larger companies, with U.S. technology firms performing especially well during the first half of the year. The clear result of the U.S. election in November removed a source of potential uncertainty, and a year-end rally ensued after investors took the view that the new administration's embrace of lower corporate taxes and deregulation would benefit company

earnings. Stocks outside the U.S. did not perform as well amid concern about the possible negative effect of U.S. tariffs on trade and the fiscal impact of increased defence spending. The Energy and Materials sectors lagged due to subdued global economic growth.

The portfolio benefited from positions in Taiwan Semiconductor Manufacturing, Nvidia and Broadcom. Returns were limited by holdings in Prologis, Valero Energy and DHL.

Recent Developments

Last year's drop in inflation to levels more in line with the historical trend has created a more supportive market environment for stock selection. With fewer macroeconomic distractions, investor attention is focusing again on company fundamentals. The sub-advisor continues to believe that investors' long-term interests are best served through a portfolio that focuses on companies with the strongest fundamentals, and in which attempts are made to minimize volatility.

Related-Party Transactions

¹ The management expense ratio ("MER") is based on the direct expenses charged to the Fund and the Fund's proportionate share of the expenses of underlying funds, if any, for the stated period, excluding commissions and other portfolio transaction costs, and is expressed as an annualized percentage of the daily average net asset value during the period. RBC GAM may, at its discretion and without notice to unitholders, waive or absorb certain operating expenses. MER includes the waiver or absorption by RBC GAM of certain operating expenses, while the MER before absorption shows the MER prior to operating expenses being waived or absorbed by RBC GAM.

² The Fund's portfolio turnover rate gives an indication of the level of activity employed by the portfolio manager. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher the Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the Fund. The portfolio turnover rate is not applicable to money market funds.

³ The trading expense ratio represents total commissions and other portfolio transaction costs of the Fund and the Fund's proportionate share of such costs of underlying funds expressed as an annualized percentage of daily average net asset value during the period. The trading expense ratio is not applicable to fixed-income transactions.
