MANAGEMENT DISCUSSION OF FUND PERFORMANCE

Investment Objective and Strategies

The Fund pursues above-average total returns comprised of interest income and capital growth by investing in higher-yielding corporate or government debt securities from anywhere around the world.

The Fund invests primarily in global high yield debt securities rated below BBB(-) by Standard & Poor's. The portfolio manager employs a value-focused philosophy for corporate bonds, striving to invest in quality companies having stable to improving credit profiles which are undervalued given current market sentiment. The Fund manages risks by limiting its holdings in any single industry, issuer, country or credit rating. The Fund may use derivatives to protect against losses from changes in interest rates, market indices and currency fluctuations.

Risk

There were no significant changes to the investment objective and strategies that affected the Fund's overall level of risk during the reporting period. The risks of investing in the Fund and the suitability of the Fund for investors remain as discussed in the Simplified Prospectus.

Results of Operations

The Fund's net asset value rose to \$3.9 billion as of December 31, 2021, from \$3.7 billion at the end of 2020. The increase was due to a combination of net inflows and investment returns.

Over the past year, the Fund's Series A units lost 0.7%, which underperformed the 1.3% rise in the benchmark. The broad-based index 1 rose 4.6% and the broad-based index 2 fell 2.0%. The Fund's return is after the deduction of fees and expenses, while benchmark and broad-based index returns do not include any costs of investing. See the Financial Highlights section for the management expense ratios and the Past Performance section for the returns of any other series, which may vary because of differences in management fees and expenses.

Of the Fund's two major areas of investment, U.S. high-yield bonds offered attractive returns in 2021, while emerging-market government bonds registered declines. The Fund's above-benchmark allocation to emerging-market bonds had a negative impact on relative returns.

U.S. high-yield bonds were supported by a recovering U.S. economy, improving company balance sheets, continued fiscal and monetary stimulus, and investors' appetite for securities offering a degree of income in the low-yield environment. In contrast, returns in emerging-market bonds issued by national governments were held back by rising U.S. Treasury yields, which made it more expensive for emerging-market issuers to service dollar-denominated bonds. Given

the less benign environment for emerging-market bonds, the portfolio manager reduced exposure to riskier countries with less attractive valuations. That said, returns among countries and industries were more uniform in 2021 than in 2020, as the economic recovery lifted all boats to a greater or lesser degree.

The Fund's performance was aided by its holdings in the U.S. Energy sector, as oil prices rose significantly during the year. In addition, the Fund's investments in utility, auto and consumer-goods companies also performed well, contrasted with the negative impact of the Fund's investments in the Financials sector. In emerging markets, smaller-than-benchmark exposure to riskier countries, such as Sri Lanka and Belarus, helped performance, offset by the negative impact of Ghana and El Salvador, both of which were affected by a deteriorating fiscal situation. The higher sensitivity of the Fund's emerging-market investments to rising interest rates also held back performance.

Recent Developments

The portfolio manager believes that economic growth will continue into 2022 but recognizes that returns on U.S. high-yield bonds are likely to be modest given their historically rich valuations. However, corporate balance sheets remain strong and default rates low, so the risk of a severe downturn appears to be limited, in the view of the portfolio manager. The Fund is positioned such that the Fund's overall riskiness is similar to the benchmark.

Over the year ahead, the main risks for emerging-market debt will be the extent to which the pandemic affects global commerce, the degree to which China's economy will be able to weather the debts that have pummeled its Real Estate sector and the pace at which the U.S. Federal Reserve raises interest rates. The portfolio manager intends to maintain an emerging-market portfolio profile that is slightly riskier than the benchmark in order to take advantage of the more attractive valuations offered in certain countries.

Effective April 11, 2022, all Advisor Series units with a deferred sales charge option will be re-designated as Series A units. Any redemption fees associated with such re-designations will be waived by RBC GAM.

Effective February 28, 2021, Ms. Catherine J. Kloepfer resigned as Vice Chair of the Independent Review Committee (the "IRC"). Effective March 22, 2021, Mr. Paul K. Bates was appointed as Vice Chair of the IRC. Effective April 1, 2021, Ms. Brenda Eaton was appointed as a member of the IRC.

¹ The management expense ratio ("MER") is based on the direct expenses charged to the Fund and the Fund's proportionate share of the expenses of underlying funds, if any, for the stated period, excluding commissions and other portfolio transaction costs, and is expressed as an annualized percentage of the daily average net asset value during the period. RBC GAM may, at its discretion and without notice to unitholders, waive or absorb certain operating expenses. MER includes the waiver or absorption by RBC GAM of certain operating expenses, while the MER before absorption shows the MER prior to operating expenses being waived or absorbed by RBC GAM.

² The Fund's portfolio turnover rate gives an indication of the level of activity employed by the portfolio manager. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher the Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the Fund. The portfolio turnover rate is not applicable to money market funds.

³ The trading expense ratio represents total commissions and other portfolio transaction costs of the Fund and the Fund's proportionate share of such costs of underlying funds expressed as an annualized percentage of daily average net asset value during the period. The trading expense ratio is not applicable to fixed-income transactions.

Effective March 1, 2020, the administration fees for Series A units were reduced to 0.05% from 0.10%. If the changes to the administration fees would have been in effect throughout the financial year ended December 31, 2020, the adjusted MER for each series of the Fund would be: Series A – 1.73%.
