MANAGEMENT DISCUSSION OF FUND PERFORMANCE (in USD)

Investment Objective and Strategies

The Fund seeks to achieve above-average long-term total returns by taking advantage of interest rate and currency fluctuations in world fixed-income markets. The Fund also seeks to provide total returns comprised of interest income and some capital growth. To achieve the Fund's objectives, it invests primarily in high-quality fixed-income securities, denominated in foreign currencies and issued internationally by governments and their agencies around the world.

Results of Operations

The Fund's net asset value was \$43 million as of June 30, 2023.

Over the past six months, the Fund's Series F units gained 2.4%. The Fund's return is after the deduction of fees and expenses. See the Financial Highlights section for the management expense ratios and the Past Performance section for the returns of any other series, which may vary because of differences in management fees and expenses.

Prices of global government bonds rose in the first half of 2023, reversing some of the losses incurred in 2021 and 2022, as major central banks were able to reduce the pace at which they raised interest rates amid signs of easing inflation and flagging economic growth. The exception was the U.K., where some of the developed world's fastest inflation forced the Bank of England (the "BOE") to continue raising rates faster than its peers, even with anemic economic growth. The collapse of several U.S. banks in March boosted demand for government bonds, which are perceived to offer a degree of safety in times of turmoil.

In the U.S., the Federal Reserve continued raising short-term benchmark rates, albeit in reduced increments, to a range of 5.00% to 5.25%. The European Central Bank delivered four rate hikes, putting the policy rate at 4.0%, and communicated its determination to rein in inflation through monetary policy. The BOE re-accelerated rate hikes in June, increasing its benchmark rate to 5% amid persistent demands for higher wages and widespread labour disruptions, and the Bank of Japan remained an outlier with ultra-low rates as inflation remained less of a threat in relative terms.

Yields on short-maturity bonds in general rose more than those on long-maturity issues, raising expectations of a recession. Prices of non-government bonds recovered on hopes that Europe's economy would resume expanding after entering a shallow recession and as concerns about the U.S. banking system faded.

The Fund's relative performance benefited from exposure to high-quality short-dated corporate bonds and emerging-market debt given the extra income and modest capital gains afforded by the securities.

However, the Fund's returns were limited by exposure to countries perceived earlier in the year as being closer to completing interest-rate hikes, including Australia, New Zealand, Sweden, Norway and Canada.

Recent Developments

The portfolio manager expects most government-bond markets to offer modest returns for the rest of 2023 as disinflation allows central banks to abandon the fastest pace of rate hikes in more than a generation and a stabilization in bond prices enables bondholders to collect coupons with less fear that they will be eroded by capital losses. Tighter monetary policy takes time to slow economic growth and the full effect of the past year's hikes is only now beginning to feed through, suggesting policy rates across developed economies are on the restrictive side, thereby exposing riskier assets to declines.

The portfolio manager expects the economic slowdown to lead to a widening in the gap between yields on government bonds and corporate bonds, resulting in opportunities to acquire attractively valued corporate bonds.

Effective January 1, 2023, Suromitra Sanatani was appointed as Chair of the Independent Review Committee ("the IRC"). Effective February 1, 2023, Joanne Vézina was appointed as a member of the IRC. Effective March 1, 2023, Enrique Cuyegkeng was appointed as a member of the IRC.

¹ The management expense ratio ("MER") is based on the direct expenses charged to the Fund and the Fund's proportionate share of the expenses of underlying funds, if any, for the stated period, excluding commissions and other portfolio transaction costs, and is expressed as an annualized percentage of the daily average net asset value during the period. RBC GAM may, at its discretion and without notice to unitholders, waive or absorb certain operating expenses. MER includes the waiver or absorption by RBC GAM of certain operating expenses, while the MER before absorption shows the MER prior to operating expenses being waived or absorbed by RBC GAM.

² The Fund's portfolio turnover rate gives an indication of the level of activity employed by the portfolio manager. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher the Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the Fund. The portfolio turnover rate is not applicable to money market funds.

³ The trading expense ratio represents total commissions and other portfolio transaction costs of the Fund and the Fund's proportionate share of such costs of underlying funds expressed as an annualized percentage of daily average net asset value during the period. The trading expense ratio is not applicable to fixed-income transactions.

⁴ From January 14, 2021.
