MANAGEMENT DISCUSSION OF FUND PERFORMANCE

Investment Objective and Strategies

The Fund is a strategic asset allocation fund, which focuses on providing income and the potential for moderate capital growth. The Fund maintains a balance of investments across several asset classes by investing in other funds managed by RBC GAM or an affiliate of RBC GAM (called the “underlying funds”).

The Fund’s target weightings for each asset class are 60% fixed income, 13% Canadian equities, 15% U.S. equities and 12% international equities. The actual allocation to each asset class will be no more than 15% above or below its target weighting for the fixed-income asset class, and no more than 10% above or below the target weighting for the equities asset classes.

Results of Operations

The Fund’s net asset value was \$40.9 billion as of June 30, 2025.

Over the past six months, the Fund’s Series F units gained 3.6%. The Fund’s return is after the deduction of fees and expenses. See the Financial Highlights section for the management expense ratios and the Past Performance section for the returns of any other series, which may vary because of differences in management fees and expenses.

Trade negotiations dominated the direction of financial markets during the first six months of 2025 as early optimism that the Trump administration would focus on deregulating the economy gave way to concern that he would instead implement across-the-board tariffs on U.S. trade partners. The outlook subsequently improved as the U.S. administration reached trade agreements that ensured a worst-case scenario would not unfold. Geopolitical turmoil in the Middle East sent oil prices surging toward the end of the period on fears of a wider conflict and instability in the region, but they came back down after tensions eased. The U.S. Federal Reserve left its benchmark interest rate unchanged in a range between 4.25% and 4.50% as concern that the tariff war would spark inflation outweighed worries that the economy was slowing.

The Fund’s overweight position in equities and neutral position in fixed income had a positive impact on performance. Government fixed income delivered overall gains in the first half of 2025, as coupon income from bonds issued in the U.S. and China and rising bond prices in emerging markets offset the negative impact of rising interest rates – and falling bond prices – in Europe and Japan. Investors faced challenges ranging from the inflationary and growth effects of Trump’s tariffs to the outbreak of war between Israel and Iran. Canadian bonds delivered minimal returns through the first six months of 2025, as concerns regarding higher-than-expected

inflation from U.S. tariffs led investors to demand higher yields on most fixed-income securities. The Bank of Canada cut interest rates twice early in the year, bringing the policy rate down by 2.25 percentage points since June 2024 to 2.75% as of June 30 of this year. Riskier emerging-market bonds delivered strong gains, outperforming investment-grade issuers such as China, Malaysia and Indonesia. Returns in the fixed-income segment of the portfolio were boosted by the RBC Bond Fund and the RBC Global Corporate Bond Fund.

U.S. stocks retreated from all-time highs established early in the year after Trump announced his tariffs but then rebounded to finish the period near their highs. The Information Technology sector continued to support U.S. equities, while the Consumer Discretionary sector lagged. European stocks outperformed U.S. stocks due to a shift by investors to euro-denominated assets, as well as Germany’s decision to boost government spending after decades of conservative fiscal policy. In emerging markets, an equity recovery in China, which accounts for about a third of the emerging-market benchmark, bolstered emerging-market equity performance. One of the most notable emerging-market developments in 2025 was the release of an artificial-intelligence (“AI”) model introduced by China’s DeepSeek. The release of this AI service, which might be competitive with U.S. AI leaders such as ChatGPT, boosted investor impressions of Chinese technology companies and emerging-market technology stocks in general. Returns were bolstered by the RBC European Equity Fund and the RBC Canadian Dividend Fund.

Recent Developments

Tariffs will exert a substantial drag on economic growth over the second half of 2025, but probably not to the extent of causing a global recession. Considering the short-term risks and the long-term opportunities, the portfolio manager is maintaining an asset allocation that is relatively close to neutral given heightened uncertainty in the macroeconomic backdrop and the portfolio manager’s view that the risk premium between stocks and bonds is relatively small. The portfolio manager looks for mid-single-digit returns from sovereign bonds over the year ahead, with only modest valuation risk. Stocks offer slightly better return potential, particularly outside of U.S. large caps, and the portfolio manager added to the equity allocation. Within the equity regional mix, the portfolio manager has tilted away from expensive U.S. large-cap stocks in favour of non-U.S. stocks, particularly in Europe, where valuations are more appealing.

Effective April 17, 2025, the RBC Indigo Diversified Moderate Conservative Fund was merged into the Fund and unitholders of the RBC Indigo Diversified Moderate Conservative Fund received units of the Fund on a tax-deferred basis.

Effective April 17, 2025, Series AZ units of the Fund are capped and are no longer available for purchase by new investors. Existing investors who hold Series AZ units of the Fund can continue to make additional investments into this series.

Effective January 1, 2025, the management fees for Series A and Series T5 units were reduced to 1.45% from 1.50% and for Series F and Series FT5 units were reduced to 0.70% from 0.75%.

¹ The management expense ratio ("MER") is based on the direct expenses charged to the Fund and the Fund's proportionate share of the expenses of underlying funds, if any, for the stated period, excluding commissions and other portfolio transaction costs, and is expressed as an annualized percentage of the daily average net asset value during the period. RBC GAM may, at its discretion and without notice to unitholders, waive or absorb certain operating expenses. MER includes the waiver or absorption by RBC GAM of certain operating expenses, while the MER before absorption shows the MER prior to operating expenses being waived or absorbed by RBC GAM.

² The Fund's portfolio turnover rate gives an indication of the level of activity employed by the portfolio manager. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher the Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the Fund. The portfolio turnover rate is not applicable to money market funds.

³ The trading expense ratio represents total commissions and other portfolio transaction costs of the Fund and the Fund's proportionate share of such costs of underlying funds expressed as an annualized percentage of daily average net asset value during the period. The trading expense ratio is not applicable to fixed-income transactions.

⁴ From April 7, 2025.

Effective January 1, 2025, the management fees for Series A and Series T5 units were reduced to 1.45% from 1.50%; and for Series F and Series FT5 units were reduced to 0.70% from 0.75%. If the changes to the management fees would have been in effect throughout the financial year ended December 31, 2024, the adjusted MER for each series of the Fund would be: Series A – 1.70%, Series T5 – 1.69%, Series F – 0.85% and Series FT5 – 0.85%.
