

RBC Canadian Money Market Fund

Investment Objective

To provide current income and liquidity consistent with short-term money market rates and to preserve the value of your investment. The fund invests primarily in high-quality, short-term (one year or less) debt securities, including treasury bills and promissory notes issued or guaranteed by Canadian governments or their agencies, bankers acceptances, asset-backed commercial paper and commercial paper issued by Canadian chartered banks, loan companies, trust companies and corporations.

Commentary as at June 30, 2019

The Canadian economy decelerated early in the period, making the Bank of Canada (the "BOC") less inclined to pursue interest-rate increases and instead delay rate hikes until there was evidence of faster domestic growth. More broadly, the global economy slowed in the first quarter, as trade frictions between the U.S. and China intensified, the eurozone economy slowed and the U.K. struggled to resolve Brexit. The U.S. Federal Reserve was under pressure to abandon tighter monetary policy, as waning U.S. economic momentum reduced inflationary pressures. In this environment, Canadian money-market yields fell alongside U.S. interest rates.

The portfolio manager continued to manage the Fund based on the assumption that BOC would at some point cut interest rates. However, this positioning did not offer the opportunity to obtain the extra yield that usually comes with a preference for longer-term securities, as longer-dated yields were mostly equal to short-term yields. The Fund's asset allocation was little changed, as higher yielding asset-backed

commercial paper continued to provide the most attractive terms. Commercial-paper issuance was weak and issuance of bank paper continued to be lighter than usual. The fulfillment of regulatory fund liquidity was achieved through the active management of maturities, as well as holdings of government securities.

Many major central banks appear primed to lower interest rates and more generally stimulate borrowing in support of economic growth. The Canadian economy, in contrast, appears to be holding up relatively well, making it unlikely, in the view of the portfolio manager, that the BOC will cut rates anytime soon. But it is also fairly certain, in the view of the portfolio manager, that policymakers will not be raising short-term rates anytime soon. Accordingly, the portfolio manager is assuming an outlook in which yields will be pressured downwards and investors do not get adequately compensated for investing in longer-term instruments.

RBC Canadian Money Market Fund

Disclosure

RBC Funds, BlueBay Funds, PH&N Funds and RBC Corporate Class Funds are offered by RBC Global Asset Management Inc. and distributed through authorized dealers.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus or Fund Facts document before investing. Except as otherwise noted, the indicated rates of return are the historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed or covered by the Canadian Deposit Insurance Corporation or by any other government deposit insurer. For money market funds, there can be no assurances that the fund will be able to maintain its net asset value per unit at a constant amount or that the full amount of your investment in the fund will be returned to you. The value of mutual funds change frequently and past performance may not be repeated.

Quartile rankings are determined by Morningstar Research Inc., an independent research firm, based on categories maintained by the Canadian Investment Funds Standards Committee (CIFSC). Quartile rankings are comparisons of the performance of a fund to other funds in a particular category and are subject to change monthly. The quartiles divide the data into four equal segments expressed in terms of rank (1, 2, 3 or 4).
