Commentary as at June 30, 2019

The S&P 500 Index outperformed most other developed equity markets during the first half of 2019, and Canadian equities recorded strong returns during the period as measured by the S&P/TSX Composite Index. Commodity prices, including oil and gold, appreciated during the period, and the Canadian dollar strengthened versus the U.S. dollar.

Overweight exposure to stocks exhibiting momentum was the largest contributor to returns during the period, while an overweight position in value stocks held back returns the most. Positioning in smaller-capitalization stocks hurt relative performance.

Sector allocation and security selection had a negative effect on returns. An underweight position in the Information Technology sector hurt returns, while an overweight in Consumer Staples

held back performance. Security selection within Health Care, Information Technology and Consumer Discretionary detracted from returns. Appfolio and Rent-A-Center were the top contributors to portfolio performance. Allocations to BJ's Restaurants and Ligand Pharmaceutical negatively affected performance.

It is the policy of the Fund to maintain currency hedges at all times in order to neutralize exchange-rate movements between the U.S. dollar and the Canadian dollar. This policy had a positive effect on returns during the period.

The Fund decreased allocations to the Energy, Health Care and Financials sectors during the period and increased allocations to the Information Technology and Industrials sectors.
